AMEYA BHAMARE
Santa Clara, CA | (206) 255-4892 | ameyarb1804@gmail.com | linkedin.com/in/ameyabhamare/

CORE SKILLS

- **GenAI:** LangChain, LLM-as-a-Judge, Prompt Optimization, Hallucination Analysis, CrewAI, RAG, MCP, n8n
- **LLM Evaluation & MLOps:** Model Observability, Model Governance, CI/CD, MLflow, SHAP, A/B Testing
- **Engineering:** Python, PySpark, SQL, Databricks, AWS, Azure ML, SDLC, Git, Docker, Postman, Cloudflare

RELEVANT EXPERIENCE

Data Scientist 2 | Centene | SF Bay Area May 2024 - Present

- Deployed Quality Rating System models end-to-end in Databricks **across 30+ markets** replacing legacy Excel workflows. Built evaluation pipelines using MLflow and n8n (tracing, drift, calibration) **cutting manual effort by 95%** and **saving ~500 analyst hours annually**.
- Architected a **competitive-intelligence chatbot** using **LangGraph** and RAG. Built **multi-agent workflows** for retrieval, reranking, generation, and explanation. Deployed an **LLM-as-a-Judge** framework to assess coverage and grounding. Routed low-confidence outputs to human review to build finance-aligned evaluation flywheels which **increased reviewer throughput by 3x**.
- Led a **5-person team** rebuilding the claims forecasting framework after the incumbent system missed forecasts by millions of dollars. Designed a **novel four-factor PMPM decomposition method** that uses ML exclusively to isolate population-mix effects. **Reduced MAPE from ~33% to within 12% across 6 cost categories and 6.7% bias**.
- Built **internal Python packages** using Poetry, including an **AI compliance review system** and an auto-presentation toolkit **saving 250+ hours annually**. **Managed technical delivery and pre-handoff validation** for client production deployments.
- Designed and deployed a Portfolio Support dashboard featuring multi-tier pricing models and interactive sliders for **real-time competitive-threshold recategorization**. Empowered **actuarial clients** to benchmark plan price-position data, achieving **zero production crashes** within the first three months of launch.
- Re-architected the IMP1A pipeline for competitive intelligence in R using httr2. **Reduced E2E runtime from ~2 hours to 15 minutes (9x)**. Added concurrent requests, preflight checks, and paginated retrieval, with retries, throttling, and structured diagnostic logging.
- Drove org-wide Databricks enablement for **65 analysts**. **Saved 80+ onboarding hours** and **~$10K in projected training costs**. Mentored two analysts through E2E ML projects. Identified the need for an internal AI-assisted development platform with PHI/PII guardrails. Pitched it to senior IT leaders, secured beta access, and now train my team on agent-driven workflows.
- Defined the org's **Python package deployment standards** with the platform team. Auto-published docs using great-docs, CI/CD, git hooks for commit standards, auto-tagged releases with changelogs on Posit Connect, issue templates, and release-branch publishing using **git-builder**.

AI Researcher | Amazon | Seattle Oct '23 - Mar '24

- Designed and evaluated a **SARIMA + Gaussian copula–based generative model** to synthesize large-scale storage request workloads, capturing seasonal temporal dynamics and cross-feature dependency structure to support non-disruptive S3 performance experimentation.
- Proved the robustness via an MVP on **271M encoded time-series records** achieving **74% distributional similarity** and **98% normalized frequency preservation** relative to production data.

Machine Learning Intern | Centene | St. Louis Jun '23 - Sep '23

- Implemented a **hybrid NLP entity-recognition architecture** combining rule-based extraction and domain-specific biomedical embeddings to parse ICD-10 codes and clinical attributes within medical claims at **~96% accuracy**.
- Leveraged PubMed vector integration and transfer learning to replace AWS Comprehend Medical, **projecting $25-27M in annual savings**.

Previous Roles | Bangalore, India Aug '19 - Mar '22

- **AI Consultant | Ernst & Young:** Improved recommender ranking metrics by 9x with graph-based models and built Azure Data Factory pipelines evaluating 10,000+ model submissions
- **Deep Learning Consultant | Bounce**: Deployed real-time license plate OCR, lifting scooter-rental bookings by 17%

EDUCATION

- **Data Science (Master of Science) | University of Washington | Seattle** **GPA - 3.9 / 4**
- **Computer Science (Bachelor of Technology) | PES University | Bangalore** **GPA - 3.9 / 4**
